https://github.com/sun...

Assignment: cat Command in Linux

Objective

To understand and practice the usage of the `cat` command in Linux for viewing and managing file contents.

Instructions

- Open the Terminal on your Linux system.
- Navigate to a directory that contains at least one text file.
- Use the `cat` command to display the contents of a file.

Syntax:

```
cat [options] filename
```

- Execute the following tasks and **write down** the commands you used:
 - Display the contents of a file named `my_file.txt`
 - Display the contents of `my_other_file.txt` and number all the lines
 - Display the contents of `my_third_file.txt`
- Create a new file and use the `cat` command to **add content** to that file.
- Practice the following `cat` command options:
 - `-n` : Number all lines
 - `-b` : Number only non-empty lines
 - `-s` : Suppress repeated empty lines

Submission Guidelines

- Take a screenshot & Upload on Git repo.

• friends

a. Create a directory named `dir1`

1 Use the `ls` command to verify that all directories have been created successfully.

2 Use the `tree` command to display the complete directory structure.

If `tree` is not installed, install it using:

```
sudo apt-get install tree
```

7 Practice additional `mkdir` options:

- `-p`: Create parent directories if they do not exist
- `-m`: Set permissions while creating a directory
- `-v`: Show verbose output

1 Delete the directory named `dir1`

2 Delete the directory named `picture` (including its subdirectories)

Submission Guidelines

- Take screenshots of the command output for each task.
- Upload the output screenshots to your Git repository.

IT-08-A-CySecurity/Day05/Linux C X

https://github.com/sunbeam-modular/... / Linux Commands Assignment – Part III.pdf

Assignment 1 – Using the `cp` Command

- Create a directory named `my_files` in your home directory.
- Inside the `my_files` directory, create three text files:
 - `file1.txt`
 - `file2.txt`
 - `file3.txt`(Use the `touch` command)
- Create a directory named `backup` inside the `my_files` directory.
- Use the `cp` command to create a backup of:
 - `file1.txt`
 - `file2.txt`inside the `backup` directory.
- Use the `cp` command to copy `file3.txt` to your Desktop.
- Copy the entire `my_files` directory (inside home) with a new name `my_old_files`. (Hint: Use recursive option `-R`)
- Copy the `backup` directory to your home directory.

Assignment 2 – Using the `mv` Command

- Create a directory named `my_music` in your home directory.

Linux Commands Assignment – Part III.pdf

- files.txt (Use the touch command)
- Create a directory named backup inside the my_files directory.
- Use the cp command to create a backup of:
- files.txt
- files2.txt inside the backup directory.
- Use the cp command to copy files.txt to your Desktop.
- Copy the entire my_files directory (include home) with a new name my_old_files. (Hint: Use recursive option -R)
- Copy the backup directory to your home directory.

Assignment 2 – Using the mv Command

- Create a directory named my_music in your home directory.
- Create the following files inside my_music:
 - song_1.mp3
 - song_2.mp3
 - song_3.mp3
- Create a subdirectory named old_music inside the my_music directory.
- Move song_1.mp3 to the old_music directory using the mv command.
- Rename song_3.mp3 to new_song_3.mp3 using the mv command.
- Move song_3.mp3 to your Desktop.

Submission Guidelines

- Take clear screenshots of the command output for each task.
