Tasks

1. List all directories present in the root (/) directory.

2. Identify and write the purpose of the following directories:

/etc

/home

/var

/usr

/bin

/sbin

/tmp

3. Create the following directory structure:

/srv/files/public

/srv/files/private

/srv/files/backup

4. Create one file inside each directory.

5. Display the complete directory structure using a single command.

Q2: SSH Installation and Configuration

Assignment - 2

Linux Assignment: File Permissions using `chmod` Command

Objective

To understand Linux file and directory permissions by creating files/directories and managing their permissions using the `chmod` command.

Part A: File and Directory Creation

1. Create a regular file named `example.txt` in your home directory.
2. Create a shell script file named `script.sh`.
3. Create another file named `template.txt`.
4. Create a directory named `docs`.
5. List all created files and directories and verify their existence using appropriate commands.

Part B: File Permission Tasks using `chmod`

1. Change the permissions of the file `example.txt` so that:
 - The owner has read and write permissions
 - The group has read-only permission
 - Others have no permissions
2. Add only execute permission to the file `script.sh` for:
 - Owner
 - Group
 - Others
3. Remove the write permission from the file `example.txt` for:
 - Group users
 - Other users
4. Change the permissions of the directory `docs` so that:

```
sunbeam@cyber: ~$ mkdir docs
sunbeam@cyber: ~$ ls
backup  Downloads  linux_commands.txt  my_files  my_other_file.txt  script.sh  sush  Videos
Desktop  example.txt  linux_lab  my_file.txt  nano_practice.txt  swap  template.txt
docs    file.txt    linux_test.txt  my_music  Pictures  song2.mp3  template.txt
Documents  home  Music  my_old_files  Public  suhana.txt  text.txt

sunbeam@cyber: ~$ ls -l

Chat

nano -l nano_practice.txt

Q9. Replace a word
Replace the word "simple" with "powerful" in the file.

Hint:

- Replace → (CTRL + \)

Q10. Create another file using nano
Create a new file named `linux_commands.txt` and write any 5 Linux commands with their purpose.

Example:

`ls` - List files and directories
`pwd` - Show current directory

Submission Guidelines

- Take screenshots of the nano editor output for each task
- Upload the screenshots to your Git repository

Important Nano Shortcuts (Quick Reference)

Why should root SSH login be disabled?

Q3: Linux Services Management

Objective

To understand Linux services and service management.

Tasks

1. Check the status of the SSH service.
2. Stop the SSH service.
3. Start the SSH service again.
4. Restart the SSH service.
5. Enable the SSH service so that it starts automatically on boot.
6. List all active services running on the system.

Hint: `systemctl list-units --type=service`

Questions

- What is a service in Linux?
- Difference between **start** and **enable**

Q4: Linux Users and Permissions

Objective

To understand Linux permission model and user access control.

Tasks

Ubuntu - VMware Workstation
